01 / INTRODUCTION

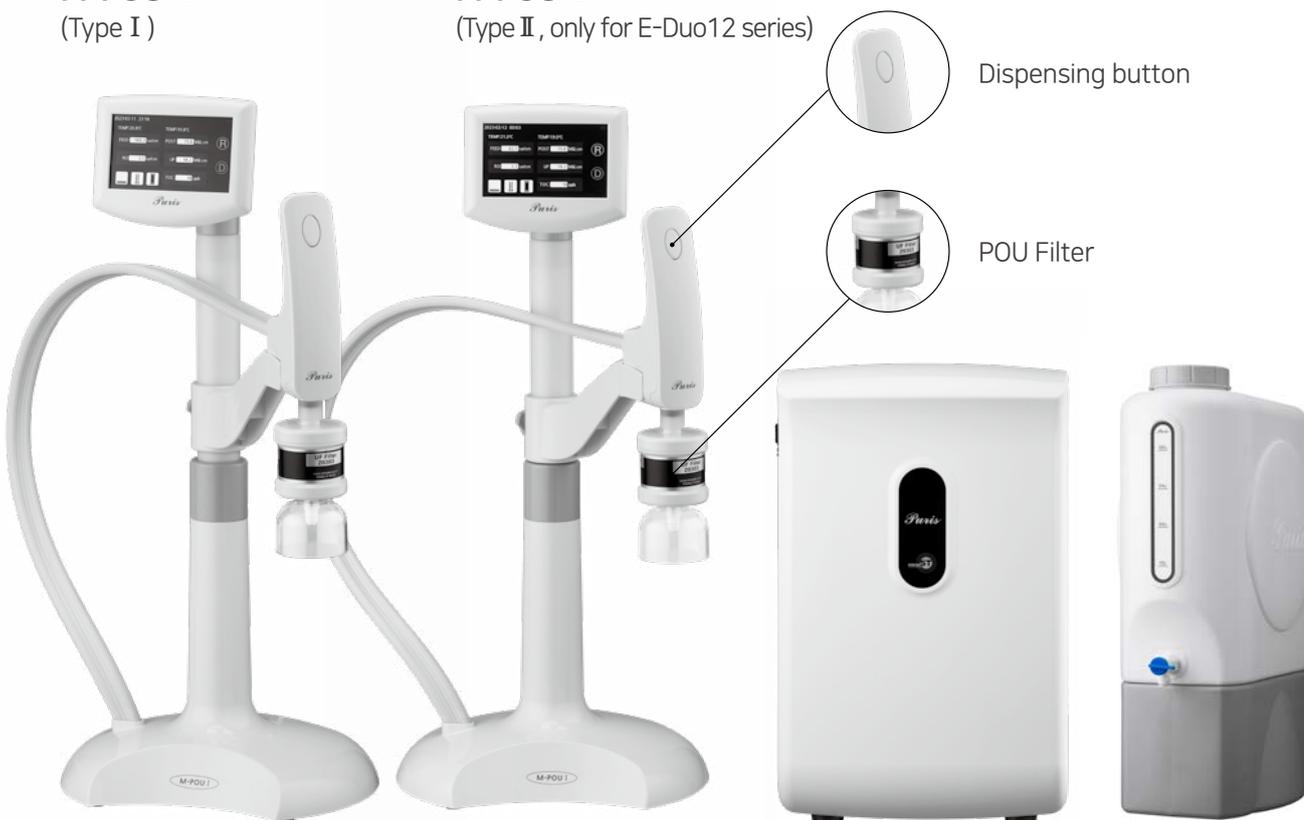

Configuration

E-Duo Series consists of Main System, M-POUs (dispensers) and ResTank

※ It can vary depending on models.

M-POU I
(Type I)

M-POU II
(Type II, only for E-Duo12 series)

Model : E-Duo12 VFT

Main System

ResTank

01 / INTRODUCTION

Reservoirs

	Item No.	Dimension
ResTank 35L	30735	W270 x D500 x H730mm
ResTank 75L	30775	W315 x D580 x H810mm

Consumables

Filters	Item No.	사이즈
Duo-MA Pack	27101	Removes large particles and free chlorine from tap water.
Duo-RO Membrane	27102	Remove large contaminants.
Duo-MB Pack	27202	Remove trace levels of organics
Duo-PI Pack	27303	Removes trace levels of ions from ultrapure water.
Duo-UV Lamp(185+254nm)	27301	The UV 185 nm Lamp kills bacteria and reduces the level of organic molecules in the water.
POU Filters		It is attached to the Point of Delivery outlet. It provides additional quality and insurance that trace contaminants related to specific applications are removed just before ultrapure water is delivered.

※ E-Duo Series provides below POU Filters.

Duo-UF Filter	27304	Pyrogen-free water for removing of pyrogens(endotoxin), Rnase, Dnases.
Duo-Metal Filter	27305	Removes specific heavy metals and micro-particles.
Final filter I	20304	Filters for bacteria-free and particulate-free water
Final filter II (M-POU II)	27206	

01 / INTRODUCTION

Specifications

		E-Duo13 UV	E-Duo13 VF	E-Duo12 VF	E-Duo12 VFT	
Flow Rate (up to)	Type I	2.0L/min	2.0L/min	2.0L/min	2.0L/min

* With Duo-UF Filter

01 / INTRODUCTION

Requirements of feed water

Feed water resource	Potable tap water
Conductivity	High conductivity feedwaters may lower purification filter life and raise Type III water conductivity
Hardness	<350 ppm as CaCO ₃
Free Chlorine	<0.05 ppm Cl ₂
Silica	<30 ppm SiO ₂
Carbon Dioxide(CO₂)	<30 ppm
Fouling Index	<10
TOC	<2 ppm
pH	5-8
Temperature	4 - 40 °C
Surrounding	Clean Laboratory environment

02 / INSTALLATION

Precautions before installation

► Power Supply

- Plug in the power cord correctly.
- Check if the power supply is correct.
- Careless opening or disconnection of the part connected to the main board may cause program errors or malfunctions.

► Location

- The device should be placed on a table in the laboratory or on a well-leveled surface.
- A floor without a table or a dirty place with dust/dirt may cause device operation error, so be sure to install it on a table.

► General Precautions

- Keep the device away from alcohol or flammable liquids.
- If flammable substances encounter any of internal electrical parts, it may result in electric shock or fire.
- Do not place any objects on top of the device. Main components such as the main board are on top of the device.
- Install the device and the water tank away from direct sunlight, as it can cause microbial growth.
- Cold winters or hot summers have an absolute effect on the filter and PCB, so it must be installed at a suitable room temperature.

► Preparing for installation

- After removing the main system body from the box, check the packaged contents.
- Place and use it in a safe place.

02 / INSTALLATION

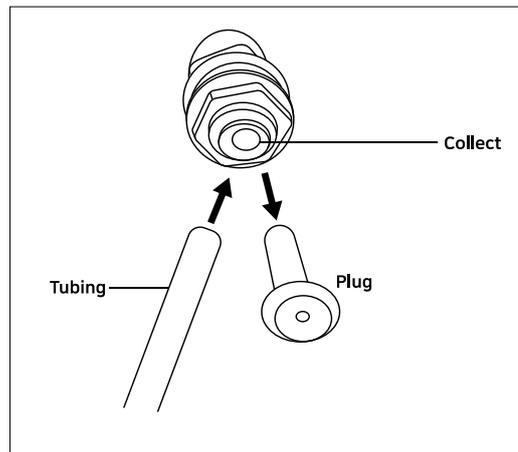

Components for installation

	E-Duo13 UV	E-Duo13 VF	E-Duo12 VF	E-Duo12 VFT
Duo-MA Pack	0	0	0	0
Duo-RO Membrane,2ea	Installed inside			
Duo-MB Pack	0	0	0	0
Duo-UV Lamp(185+254nm)	Installed inside

Final filter II (M-POU II)	-	-	0	0
Duo-UF Filter	-	0	0	0
M-POU I	0	0	0	0
M-POU II	-	-	0	0
M-POU III	Option	Option	Option	Option
ResTank(35L, 75L)	35L or 75L with level sensor, tank cork			
Installation Kit	Power cable, Tubing, User manual			

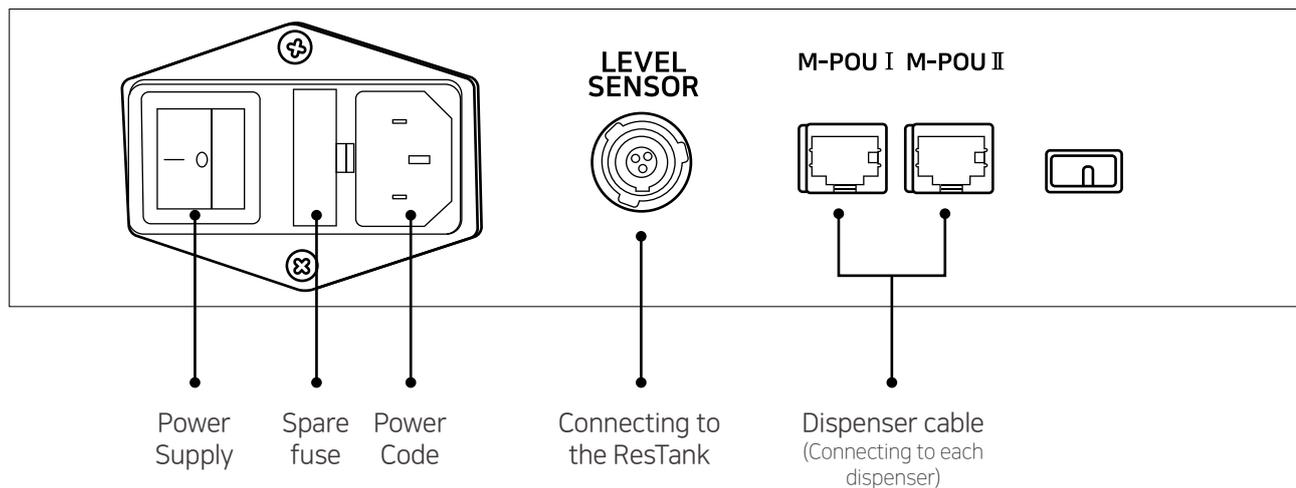

02 / INSTALLATION

Installing the Main system

- Place the device where it will be installed and then install it in the following order
- The installation location must be a place where water intake and drainage are possible.
- For smooth supply of entering water, this system should be located next to or below a water tank.
 - To connect the tube to the side of the device, first remove the leak-proof plug before connecting
 - To remove the plug, press the collector with your hand and pull the plug out.

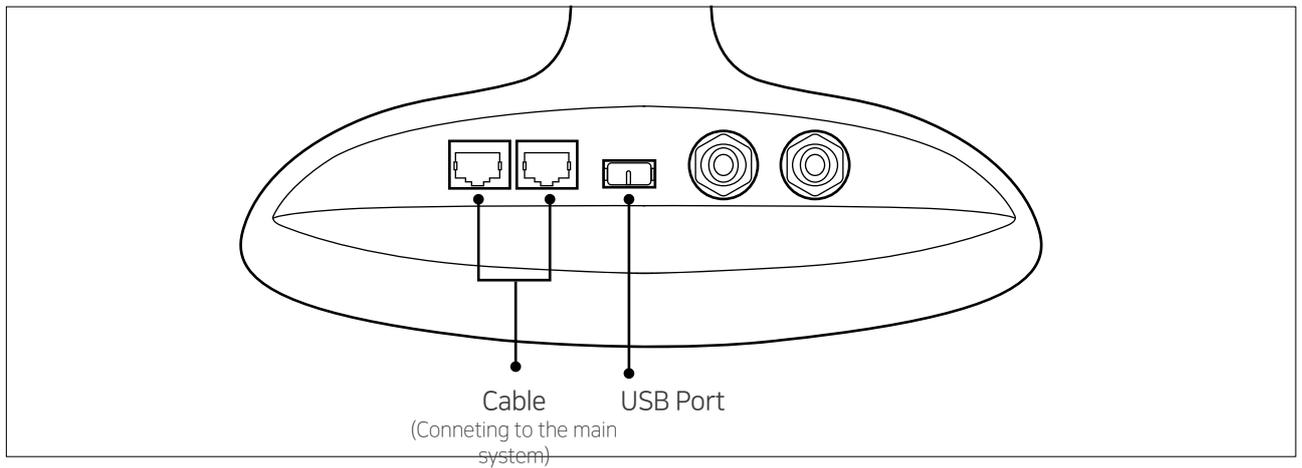

Main System

M-POU I

M-POU II

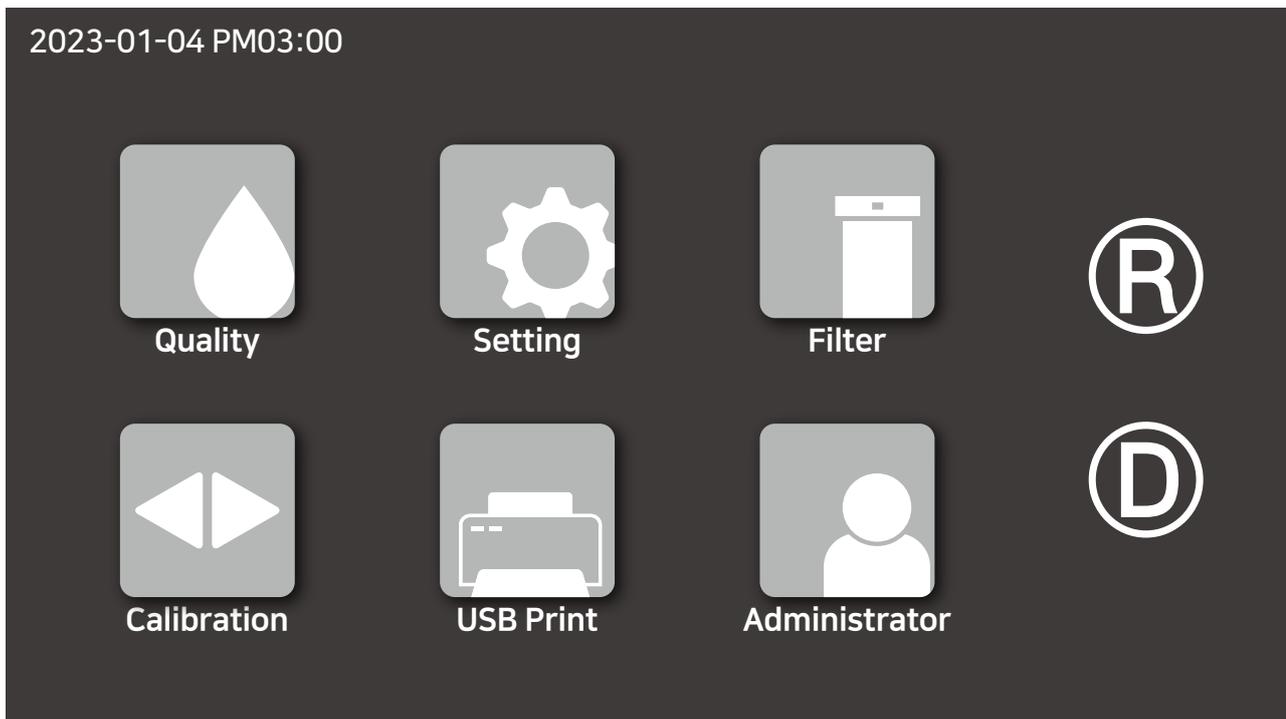

ResTank

03 / SOFTWARE

1. Main Screen (Standby mode)

2. Icons

Press the button to produce Type3(RO) water.

Press the button to produce Type1(UP) and Type2(Post) water.

Move the cursor

Save your changes

Go to the next page

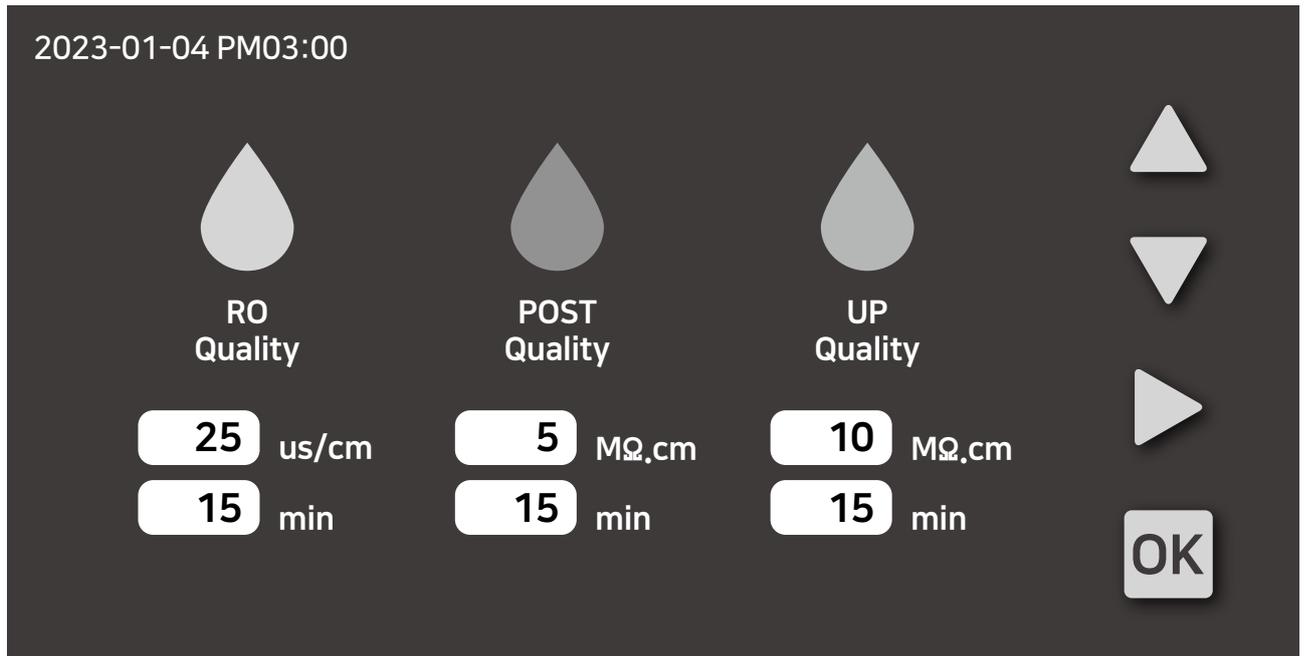

03 / SOFTWARE

3. Menu

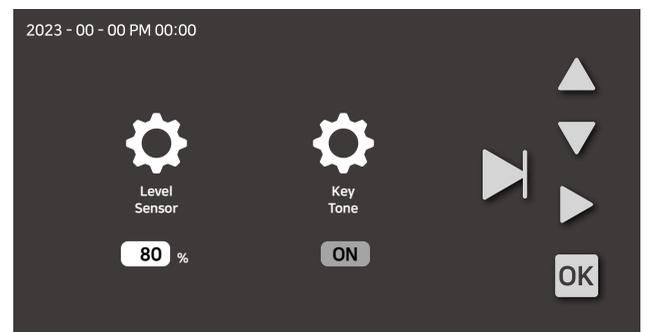

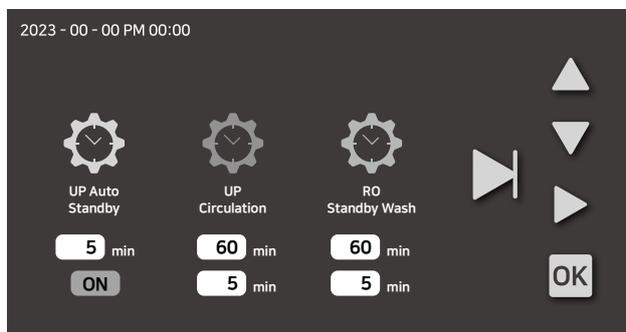

① Quality

When the water fails to reach the set water quality over the set time, a filter replacement notification is displayed. When you arbitrarily change the set water quality, it will affect the production water, so please consult with the engineer.

② Setting

You can change the settings.

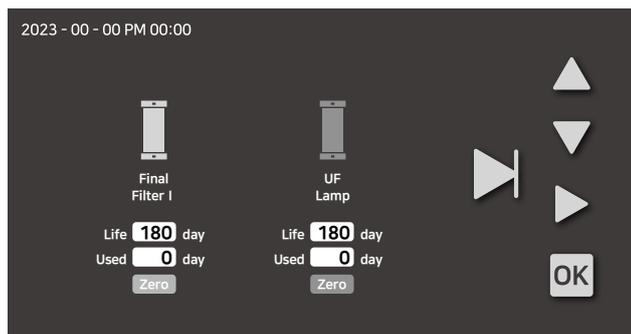

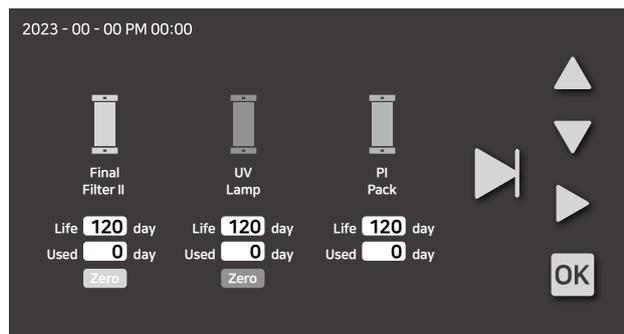

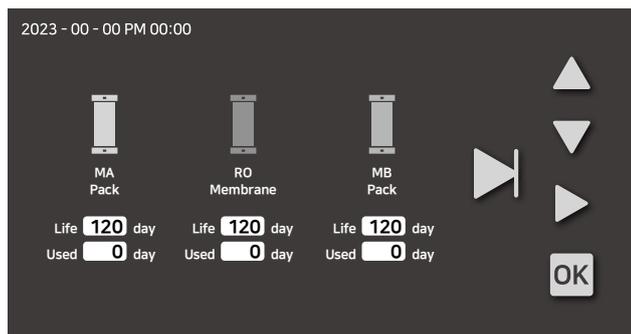

- ▶ When ultrapure water is not used for more than the entered time, it automatically switches to standby mode. This prevents idle run, reducing damage to the pump. Press the ON button to deactivate the function.
- ▶ It automatically circulates ultrapure water.(5-minute activation every 60 minutes)
- ▶ Clean the RO membrane. (5-minute activation every 60 minutes)
- ▶ While the system is in standby mode, when the water tank is under 80% full, the system will restart.
- ▶ You can turn on/off the touch sound.

03 / SOFTWARE

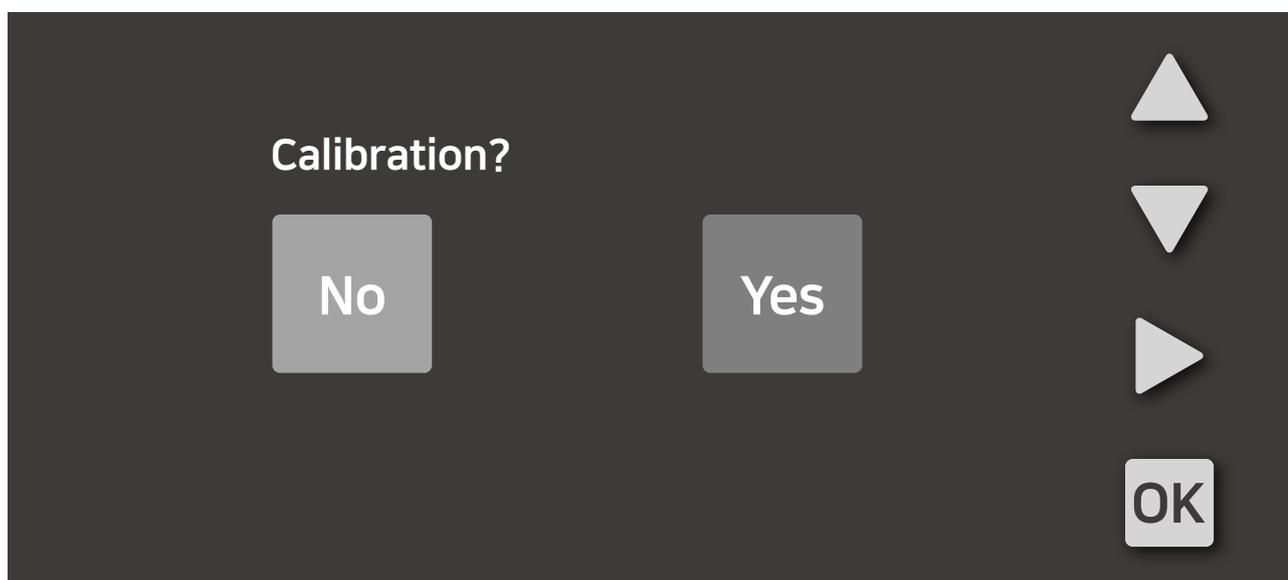

③ Filter

You can check the replacement cycle and number of days of use of each filter. After replacing the filter, press the Zero button to reset the number of days of use. (For items without a Zero button, the number of days of use is automatically reset after the replacement of the filter.)

④ Calibration

The E-Duo Series is capable of automatic calibration. Press the Calibration button on the main screen to calibrate.

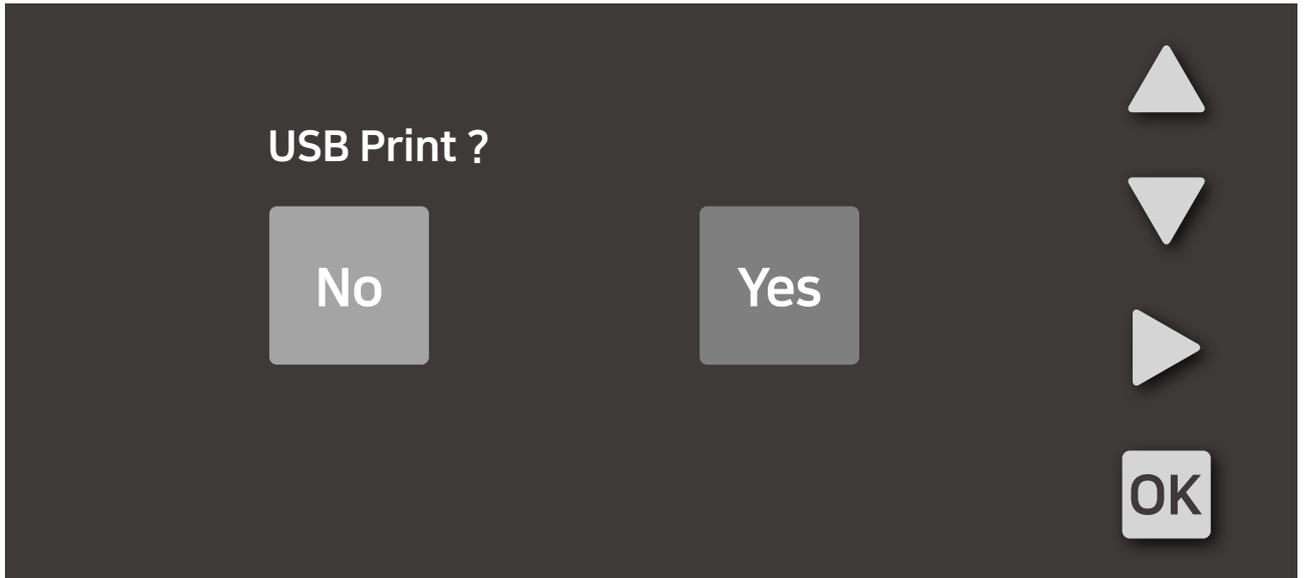

03 / SOFTWARE

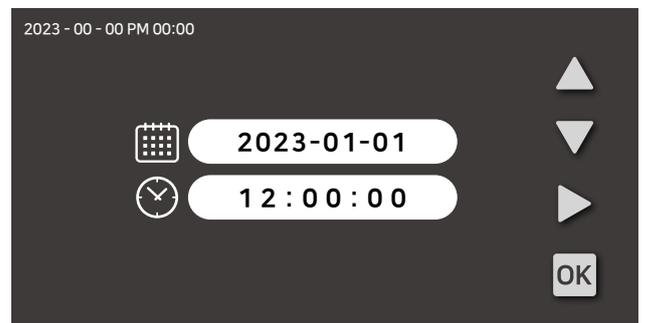

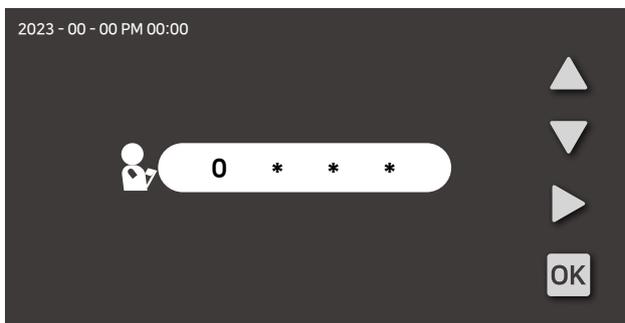

⑤ USB Print

Water quality data that is saved in USB. After connecting the USB port, press the Yes button to save.

⑥ Administrator

In administrator, you can change the date and time and system settings. The password is "0000".

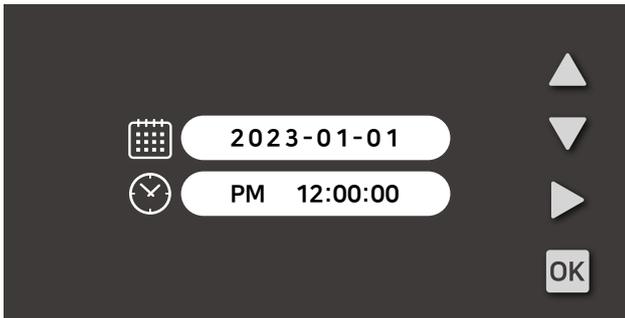

04 / OPERATION

① Initial screen

1. Displayed MIRAE ST and model.

2. When the device is operated for the first time, the screen to set the date and time will appear. Touch the desired location to make the number pad shown on the right display. Press the 1/E button to change to the English keyboard.

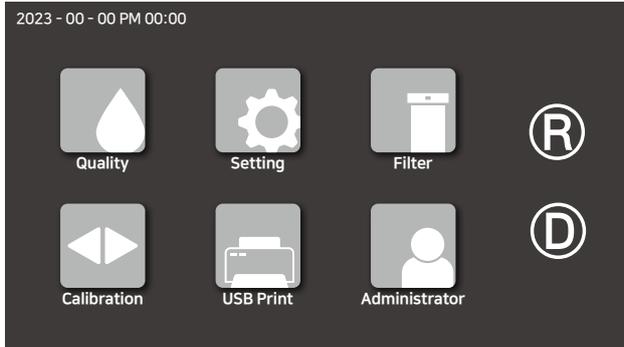

3. Put wifi ID and password. (only lower case letters and numbers)
※ Press the OK button to move to the next screen.

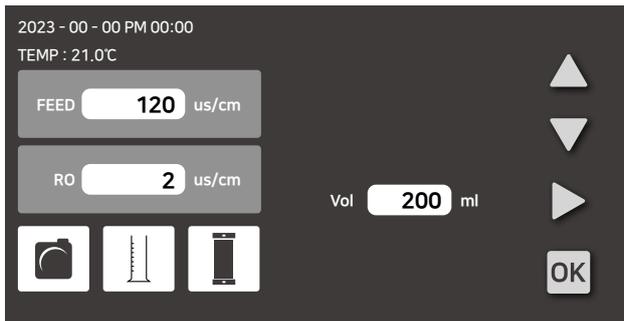

04 / OPERATION

② Main Screen

Date and time are displayed at the top. (It takes about 5 seconds to boot. When the device is operated during boot, errors may occur. In this case, reboot the system.)

③ Operation

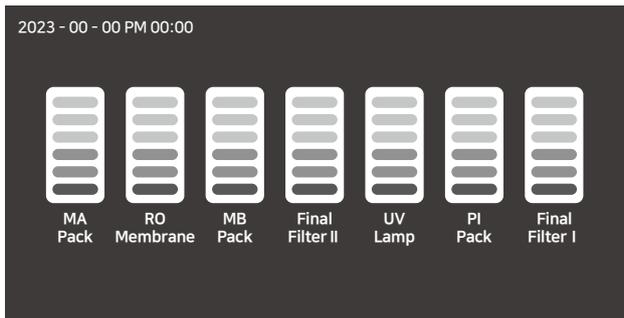

Dispensing

Press the R button on the main screen to produce Type III water, and press the D button to produce Type I and II water. Temperature, Feed water quality, and production water quality are displayed. Press the button on the dispenser to start dispensing water

※ Volumetric dispensing

During ultrapure water production, touch the icon above to dispense the desired volume of water.

Filter Status

During operation, touch the button above to check the used amount and remaining amount of the installed filter. It will automatically disappear after 10 seconds.

Saving to USB drive

This function saves water quality information stored in the device to a USB drive. After connecting to the USB port of M-POU I, II, and III, press USB PRINT on the menu screen and touch the YES button on the next screen to save to the USB drive.

05 / MAINTENANCE

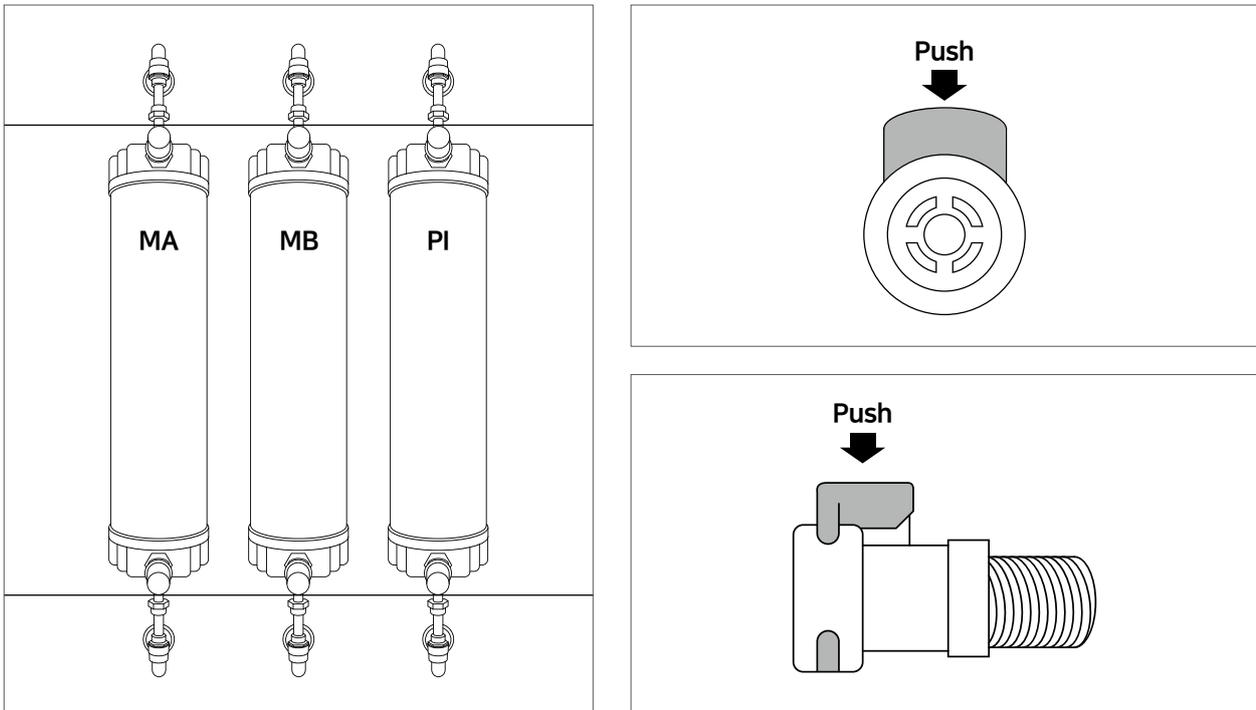

① Filter lifetime

Duo-MA Pack	120 days
Duo-RO Membrane(2ea)	365 days
Duo-MB Pack	180 days
Duo-PI Pack	180 days
Duo-UV Lamp	365 days
Final filter I	180 days
Final filter II (M-POU II)	180 days
Duo-UF Filter	180 days

※ The above replacement cycle may vary depending on the water quality and used amount.

② Filters Installation

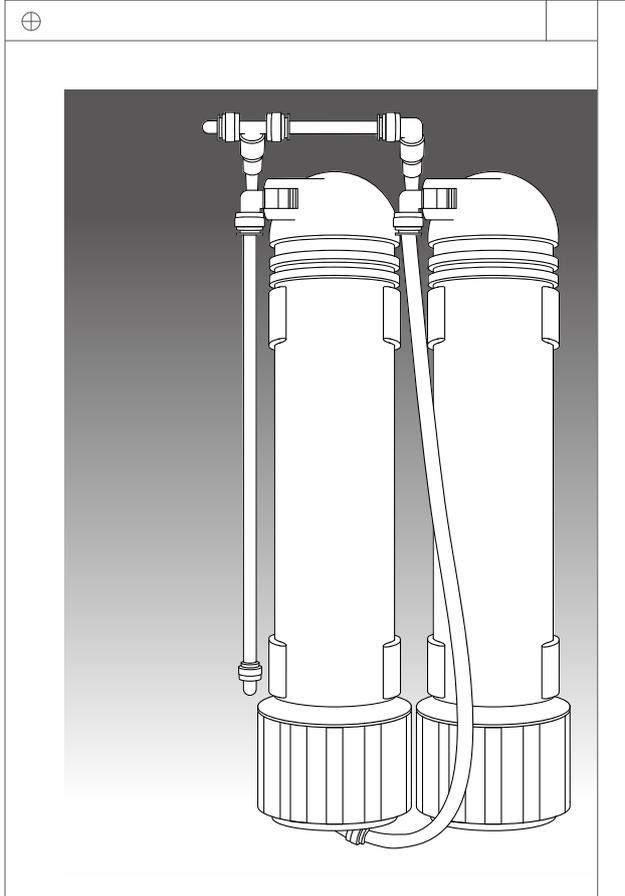

1. Installation of MA Pack, MB Pack, PI Pack

1. Open the front door. There are magnetic attached so, you don't need tools to open the door.
2. When you press the upper part of the connector connected to the top and bottom of the filter, the tubing is separated.
3. After replacement, the number of days of use is automatically reset.

05 / MAINTENANCE

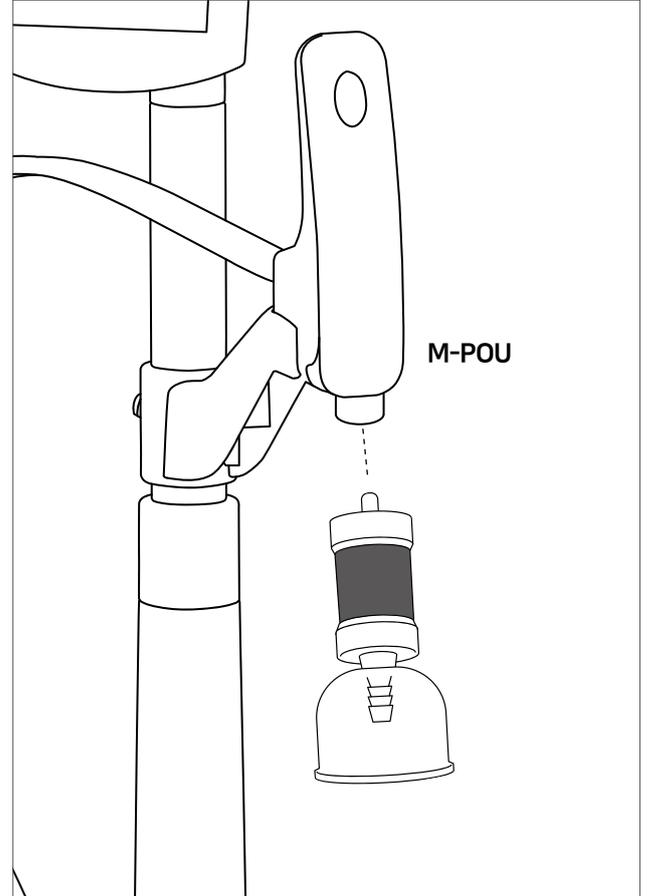

2. Installation of RO Membrane

1. Open the hand screws of the left door of the system.
2. Remove the connected tubing, install the new product, and connect the tubing to the original one.
3. The E-Duo Series is equipped with two membranes.
4. After replacement, the number of days of use is automatically reset.

* When the tubing is connected in the wrong direction, the water does not come out.

3. Installation of POU Filters

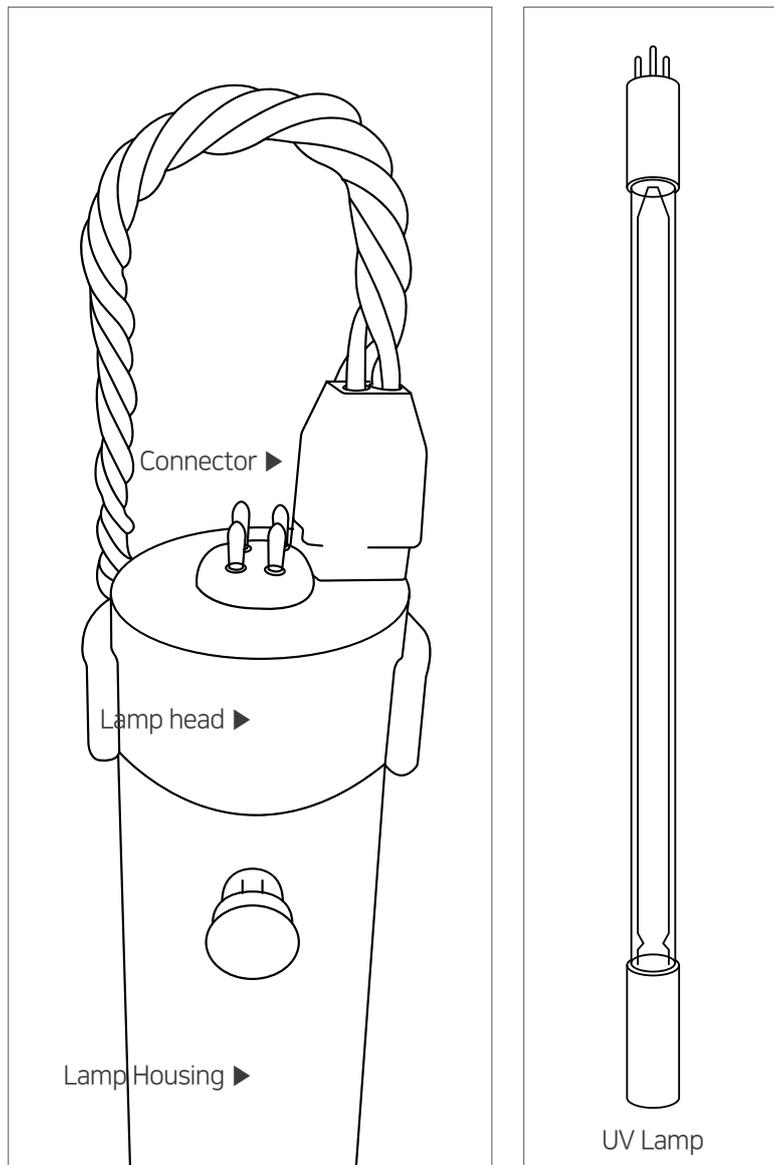

1. Turn the filter clockwise to remove it from the dispenser.
2. Turn the POU counterclockwise to install the new filter.

*If you turn it too hard, the dispenser part may be damaged.

05 / MAINTENANCE

4. Installation of UV Lamp

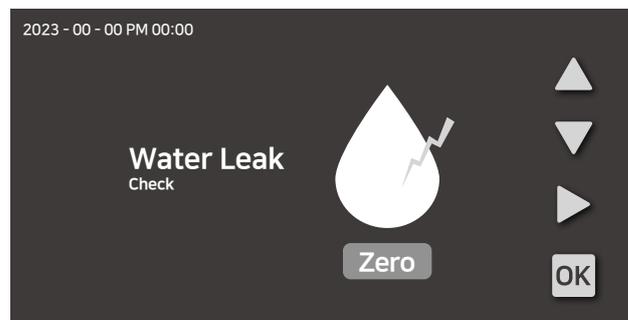

1. Open the hand screws of the left door of the system.
2. Remove the lamp head from the cradle and separate the connector from the lamp.
3. Lift up the separated lamp to remove it from the housing, insert a new lamp, and connect the connector.

06 / TROUBLE SHOOTING

If a "Replace" message is displayed, replace the applicable filter.

A leak has been detected inside the device. Turn off the power of the device and check the inside.

You have connected a filter that has already been used or there is an error in the reader. Contact the place of purchase or the manufacturer.
